

VPNaaS

Fast **deployment** ✓

SD-WAN **integration** ✓

High **availability** ✓

Zero-trust **architecture** ✓

Our **solution**

Virtual private network as a service

The requirement for organizations to support a secure remote workforce has increased rapidly, leaving IT departments struggling to support this transition. With VPNaaS, Meriplex creates a secure and virtual private connection for your employees to send and receive data across the corporate network while protecting sensitive information.

Enhanced **performance**

VPNaaS provides remote employees a seamless and quick connection in your network without any lag from current infrastructure constraints

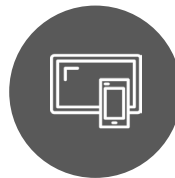

Segregating **traffic**

Take advantage of IPSec to provide full network access to your employees while simultaneously utilizing SSLVPN to publish only certain services to secure your environment

Device **scalability**

Connect all your devices with VPN by leveraging Meriplex private cloud infrastructure giving your organization the flexibility with no limitations

Bring your own **device**

VPN client can be installed on any device, company or employee-owned, supporting Windows, Linux, Apple, and Android for accessibility anywhere, anytime
